I give the most Charming Sysop technical and web design service. Amazon Web Services (AWS) Registered partner Almost 20 years of experience making the internet work the way clients want I have a flare for design and esthetics. I love involved clients. If you are involved any results will be much better. Call me about building your dream Internet Presence, even if previously you were quoted 15 times more than you thought it should cost. The cost saving is due to my VAST experience in knowing how to do things myself with Open Source Software. I accept connection requests from anyone that might be interested in my varied services.

Sysop - Cloud Administrator - APN Registered Consulting Partner AWS

I have AWS Amazon Web Service Sysop experience in building and

designing: EC2 - Computer power, as strong as you need whenever you need it Elastic Block Storage - Expandable Storage Volumes EC2 Security groups - Keep your files and systems extremely secure Identity and Access Management - IAM - Give employees and clients access as they need SES - Simple Email Service - Send personal email or a blast to get directly to the inbox!!! S3 - Scalable storage - Put 1 file or a petabyte without configuring anything (Dropbox uses it) Cloudfront - broadcast and streaming. Glacier Route 53 - manage your domains, serve different website to different countries Backup and disaster recovery I am an email expert. I have built and managed Sendmail, Postfix and Exchange servers. My knowledge of how email and spam filters interact can serve you well. Be sure to use an email-address@yourdomain.com instead of generic gmail, etc. I have implemented several projects making different uses of SES to get email into the inbox. Ask freely for advice! I offer full LAMP support (Linux Apache Mysql Php). I have built, designed and managed web servers and websites. I can deal with that missing comma in the config file causing your php to give you the white screen of death, through to the missing comma on your sites text. Amazon Web Service lets you spread out website functionality. A website doesn't need to be all on one server or several servers in the same room Scalability: You can start small, even tiny and grow huge. You Don't need to pay up front for massive disk space or computing power. Start with the free tier, pay pennies for the first year, then grow to become a force in the market Lately I have designed: Backup scripts that copy files from ec2 to s3 Set Wordpress to store media files at s3 - Guaranteeing as much space as they need Monitoring scripts, storage of all media files from websites on S3 Troubleshooted more problems caused by others than I can count.

Wordpress and Web Design Expert

Master of the Web

Make your website look and work like you want!! I am experienced in the following and even happier to expand into new specialities: E-Commerce Sites that syncs with your Ebay and Amazon Store CSS Woocommerce - Retail - Direct sales sites Email Blasts that go to the INBOX even in gmail! Vtiger - CRM Customer Relationship Management - remember everything that goes on and contact those who NEED to be contacted. Sites for Therapists Sites for Dentists Author sites to promote your books - paper and ebooks Brochure sites for small businesses Media Streaming at affordable rates - Using Amazon AWS infrastructure. ASK....

Milkhoney.co.il - System Administrator
